

EZ-EYE

VIDEOSCOPE

EZ-EYE Series 5000 Videoscope is a general purpose color videoprobe that integrates the latest in miniature CMOS camera technology with solid state LCD color displays. **EZ-EYE** employs a 10mm x 1M probe which can be bent into almost any shape, making this an ideal tool for ‘fish-tailing’ into awkward or complex areas. Three (3) brilliant white LEDs’ in the probe tip provide adequate light for inspection in dark areas – light intensity is controlled by the combination on-off / light control switch on the control handle. A wide assortment of interchangeable probe lengths and accessories expand the systems functionality.

EZ TO OPERATE

EZ TO REPAIR

EZ TO OWN
